Name: Memory

A	Definitions
Flash storage	1
Solid State Drive (SSD)	2
Primary storage	3
Virtual memory	4
Storage medium	5
Non-volatile	6
Peripheral	7

B	Key words		D	Key words	
8	Non-volatile memory which cannot be over-written. Generally used for booting		**12**	Memory which requires power	
9	Any hardware which can hold, read and write data		**13**	A device which attaches to a networked computer and makes it behave like a WAP	
10	Single transistor / capacitor RAM which needs to be refreshed every few milliseconds		**14**	Main processing unit of the computer, comprising the Arithmetic and Logic Unit, the Control Unit and the immediate access store	
11	External high-capacity storage		**15**	A device which can hold, read and write data
